

Industrial Education & Technology

With the aim of establishing KMITL as a center of excellence in education, to produce vocational teachers for technical colleges and to teach general education subjects in every faculty at KMITL, the departments of Science, Languages, Humanities, and Social Sciences were relocated from the Faculties of Architecture and Science to form this new faculty in 1977.

We are now renowned, both within Thailand and Internationally, in the field of industrial education and technology. Our Faculty emphasizes the combination of the teaching profession with vocational education (engineering, architecture, agriculture etc.) to create graduates with effective teaching and professional skills. The emphasis is on teaching and intensive research to develop students to be leaders in education and in the use of technology related to modern education - specialists, who possess multiple skills and knowledge about technology practices.
