

Information Technology

The Faculty of Information Technology, established in 1997, was the first of its kind in Thailand, and is dedicated to producing high-quality IT professionals at all levels, offering Bachelor's, Master's, and doctorate degrees. Over 3,000 graduates from KMITL are now working for leading IT organizations in both the public and private sectors and are assisting in the progress of Thailand's 4.0 initiative.

We give special importance to research development and the Faculty has thirteen laboratories to support faculty research for educational purposes at post-graduate levels. Our academic staff has participated in consultation and co-operation with the nation's leading organizations and a large number of our research articles have been accepted and published by outstanding national and international journal publishers.

The success and fame of the faculty, fully recognized nationally and internationally, comes from its excellent academic works, and reflects our mission of being "a truly innovative organization for academic excellence in Information Technology Education".
