

Medicine

Established in 2018, the Faculty of Medicine at KMITL is proud to be the first and only International Medical Faculty in the country. Built upon the foundations of an innovative global medical curriculum and a vision to develop well-rounded medical doctors for the 21st century and beyond, our talented team of medical professionals, researchers and instructors are ready to meet the demands of integrated learning. Our four targeted outcomes are:

1. Professional Competencies
2. Research Competencies
3. 21st century skills
4. Internationalization and representation of the Faculty's drive to achieve excellence in medical education and scientific research fields.

We encourage our students to collaborate with other faculties within the university to explore creative potential outside the realm of medicine. This multi-disciplinary approach gives our medical students dynamic opportunities to challenge themselves in many different facets and subjects including bioengineering, engineering, architecture and agriculture.

To align with the university and community at large, our efforts to teach and train the next generation of medical doctors and skilled scientific researchers will bring us one step closer to sustainable healthcare solutions and inspired medical and research initiatives for the future.
