

Advanced Manufacturing Innovation

The College of Advanced Manufacturing Innovation has been established to provide students with a multidisciplinary education - mechatronics, mechanics, electrical engineering, material science - in order to aid the development of advanced manufacturing technologies. The theory taught is supported by the acquiring of strong practical skills in our well equipped laboratories.

Our aim is to create specialists and innovators and to establish innovations in advanced manufacturing technologies. We are collaborating with both national and foreign governments, private sectors and universities in Thailand and abroad.

Through this systematic approach, our vision is to be the hub of advanced manufacturing innovations for ASEAN communities, researching and developing advanced manufacturing technologies and producing a highly skilled workforce for advanced manufacturing.
