

Institute of Music, Science & Engineering (IMSE)

In response to the rapid expansion in the media and entertainments sector over the past 10 years, KMITL has recently launched the IMSE to help address a shortfall in qualified manpower within this sector.

IMSE now offers a B.Eng. in Music Engineering and Multimedia with courses in sound engineering and music technology that will provide successful students with excellent career opportunities in the industry.

Students will not only be taught the skills relevant to the technical side of sound engineering and acoustics, but will also be exposed to the artistic aspects including reading and understanding various types of music and multimedia, so that they may work efficiently with musicians and other content providers.

Our mission is to provide our students with high-quality education in sound engineering and music technology to allow them to contribute to developing a world class music industry in Thailand.
